

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (previously presented) A storage bin comprising:
 - a. a container including one or more apertures; and
 - b. a label holder configured to rotatably and detachably couple with the container, wherein the label holder comprises one or more protrusions configured to cooperatively engage with the one or more apertures, and further wherein the label holder is configured to hold a label while rotating.
2. (original) The storage bin of claim 1, wherein the storage bin further comprises a lid configured to mate with the container so as to create a positive seal.
3. (original) The storage bin of claim 2, wherein the lid further comprises a tab configured to facilitate removal of the lid from the container.
4. (original) The storage bin of claim 1, wherein the container is substantially rectangular.
5. (original) The storage bin of claim 1, wherein the storage bin is uniformly formed from a homogenous material.
6. (original) The storage bin of claim 1, wherein the label holder is further configured to hold and allow insertion and removal of a label.
7. (previously presented) The storage bin of claim 6, wherein the label ranges in size from 3" x 5" to 8.5" x 11".
8. (previously presented) The storage bin of claim 6, wherein the label ranges in size up to 8.5" x 11".

9. (canceled)
10. (previously presented) A storage bin comprising:
 - a. a chamber configured for storing;
 - b. a rotatably attachable label holder including one or more protrusions, wherein the label holder is configured to hold a label while rotating; and
 - c. a label securing structure coupled to the chamber and configured to detachably couple the rotatably attachable label holder to the chamber, wherein the securing structure comprises one or more apertures configured to cooperatively receive the one or more protrusions.
11. (original) The storage bin of claim 10, wherein the storage bin further comprises a lid configured to detachably couple with the chamber.
12. (original) The storage bin of claim 10, wherein the chamber further comprises one or more handles coupled to the chamber.
13. (original) The storage bin of claim 10, wherein the storage bin is uniformly formed from a homogenous material.
14. (original) The storage bin of claim 10, wherein the label holder is clear.
15. (original) The storage bin of claim 10, wherein the label holder is configured to hold a 3" x 5" card.
16. (original) The storage bin of claim 10, wherein the label holder is uniformly formed from a rigid plastic.
17. (previously presented) A plastic storage bin comprising:
 - a. hollow body with a front end and a rear end, wherein the hollow body further comprises a first securing structure on the front end, wherein the first securing structure includes one or more apertures; and

- b. a label holder comprising a second securing structure, wherein the second securing structure includes one or more protrusions and further wherein the first securing structure rotatably and detachably mates with the second securing structure to secure the label holder with the hollow body, wherein the label holder is configured to hold a label while rotating.
18. (original) The plastic storage bin of claim 17, wherein the hollow body is generally parallelepiped-shaped.
19. (original) The plastic storage bin of claim 17, wherein the label holder is configured to allow a 3" x 5" card to be inserted and removed therefrom.
20. (previously presented) A labeled storage apparatus comprising:
- a. a container comprising integrally formed inner walls and outer walls and one or more apertures coupled to the outer walls;
 - b. one or more label holders each comprising one or more protrusions configured to rotatably and detachably engage with the one or more apertures and configured to hold a label while rotating; and
 - c. a lid configured to detachably couple with the container.
21. (original) The labeled storage apparatus of claim 20, wherein the label comprises a 3" x 5" card.
22. (original) The labeled storage apparatus of claim 20, wherein the label comprises paper with a size in the range of 3" x 5" to 8.5" x 11".
23. (original) The labeled storage apparatus of claim 20, wherein the label ranges in size up to 8.5" x 11".
24. (original) The labeled storage apparatus of claim 20, wherein the container is in a substantially rectangular shape.

25. (original) The labeled storage apparatus of claim 20, wherein the lid couples to the container through a locking structure that frictionally engages so as to create a positive seal.
26. (original) The labeled storage apparatus of claim 20, wherein the apparatus further comprises one or more guiding means configured to detachably couple with the outer walls.
27. (original) The labeled storage apparatus of claim 20, wherein the apparatus is uniformly formed from a homogenous material.
28. (original) The labeled storage apparatus of claim 27, wherein the homogenous material comprises a polymer resin.
29. (original) The labeled storage apparatus of claim 27, wherein the homogenous material comprises polypropylene.
30. (original) The labeled storage apparatus of claim 27, wherein the homogenous material comprises a liquid impervious plastic material.
31. (original) The labeled storage apparatus of claim 20, wherein the lid further comprises a tab configured to facilitate removal of the lid from the apparatus.
32. (previously presented) A storage bin comprising:
 - a. a container means comprising an inside and an outside, wherein the inside comprises a main chamber configured for storing;
 - b. a lid configured to cooperatively engage with the container means;
 - c. a label holder securing means comprising a plurality of apertures, wherein the label holder securing means is coupled to the outside of the container; and
 - d. a label holder configured for holding a label and comprising a plurality of protrusions, wherein the label holder is configured to rotatably and detachably couple with the label holder securing means by cooperatively engaging the

plurality of protrusions with the plurality of apertures, and further wherein the label holder is configured to hold a label while rotating.

33. (original) The storage bin of claim 32, wherein the label comprises paper with a size in the range of 3" x 5" to 8.5" x 11".
34. (original) The storage bin of claim 32, wherein the label ranges in size up to 8.5" x 11".
35. (original) The storage bin of claim 32, wherein the lid and the container means further comprise a locking structure configured to frictionally engage so as to create a positive seal.
36. (currently amended) A label holder configured to hold and allow insertion and removal of a label, wherein the label holder comprises one or more securing structures configured to mate and rotatably and detachably secure the label holder with a container, and wherein the one or more securing structures comprise a plurality of protrusions configured to cooperatively engage with a plurality of apertures, and further wherein the label holder is configured to hold a label while rotating, wherein the label holder further comprises:
- a. an open top;
 - b. a left side;
 - c. a right side;
 - d. a bottom side;
 - e. a front side; and
 - f. a rear side, wherein the rear side comprises an inward-facing lip configured to partially extend toward the center of the label holder from the right, left, and bottom sides.
37. (canceled)
38. (original) The label holder of claim 36, wherein the label holder is clear and is uniformly formed from a rigid plastic.

- 39. (original) The label holder of claim 36, wherein the label holder is uniformly formed from a semi-rigid material.
- 40. (original) The label holder of claim 36, wherein the label is a 3" x 5" card.
- 41. (original) The label holder of claim 36, wherein the label is a paper with a size in the range of 3" x 5" to 8.5" x 11."
- 42. (original) The label holder of claim 36, wherein the label ranges in size up to 8.5" x 11".
- 43. (canceled)
- 44. (previously presented) A labeled storage apparatus comprising:
 - a. a container comprising integrally formed inner walls and outer walls and one or more apertures;
 - b. one or more label holders rotatably and detachably coupled to the outer walls and configured to hold a label while rotating, wherein the label holders comprise one or more protrusions configured to cooperatively engage with the one or more apertures; and
 - c. a lid configured to detachably couple with the container, wherein the lid further comprises a tab configured to facilitate removal of the lid from the apparatus.
- 45. (previously presented) A storage bin comprising:
 - a. a container including one or more apertures; and
 - b. a label holder configured to rotatably and detachably couple with the container, and configured to independently hold and allow insertion and removal of a label, wherein the label holder comprises one or more protrusions configured to cooperatively engage with the one or more apertures and further wherein the label holder is configured to hold the label while rotating.

46. (previously presented) A labeled storage apparatus comprising:
- a. a container comprising integrally formed inner walls and outer walls and one or more apertures coupled to the outer walls;
 - b. one or more label holders each configured to independently hold a label therewithin while rotating, and each comprising one or more protrusions configured to rotatably and detachably engage with the one or more apertures; and
 - c. a lid configured to detachably couple with the container.
47. (canceled)
48. (previously presented) A storage bin comprising:
- a. a container means comprising an inside and an outside, wherein the inside comprises a main chamber configured for storing;
 - b. a lid configured to cooperatively engage with the container means;
 - c. a label holder securing means comprising a plurality of apertures, wherein the label holder securing means is coupled to the outside of the container; and
 - d. a label holder comprising a plurality of protrusions, wherein the label holder is configured to rotatably and detachably couple with the label holder securing means by cooperatively engaging the plurality of protrusions with the plurality of apertures, and further wherein the label holder is configured to hold a label while rotating.
